Usenet: The First Piece of the Puzzle

Usenet Introduction

If you haven't heard of Usenet it's best that you read through the next few pages to get a good understand of how it works. We'll go over two components that need to be understood before any setup of the applications can begin.

- 1.) Select a quality Usenet Provider
- 2.) Get access to a NZB Search Engine

First, take a look at the image below and notice the NZB File (on the left) feeding into SABnzbd. Once SAB is loaded with the NZB file, it starts to communicate with your Usenet Provider to obtain the requested content. Let's say your Usenet provider caps your download speeds, it will take longer to get content. Or, they might not provide the securest connection (SSH). So take the time and effort to find a reputable provider.

TotalHTPC.com Pro Recommendation (US Based Provider)

[Usenet Server](#) offers one of the best Usenet packages on the net. For \$10/month or \$95.40/year you can get an account with unlimited access, uncapped speed (un-throttled downloads!), SSL, 2250 days of retention (files are stored for 2250 days), and 20 connections (20 simultaneous file downloads). Do your own research, but it will be hard to find a better deal!

TotalHTPC.com Pro Recommendation (EU Based Provider)

[Pure Usenet](#) is the best provider based out of the Netherlands! They have a free trial to get you started and have a very cheap package to get you hosting outside the US! Their servers may retain files that have been removed from US based providers, so we definitely recommend you consider having a EU based provider as a secondary backup in case of failed downloads!
